June 5th 2019 Grand Traverse Board of Commissioners

1) Regarding the 50 acres that have been deforested next to Costco.

Not too long ago I thought I was offering an original and really good idea for a constructive use to benefit both the airport and citizens.

Of course, I'm referring to solar panels for the purpose of creating energy for the airport.

I soon came to realize that lots and lots of citizens also had the very **same suggestion**.

In fact, at the May 28th Airport Commission meeting it was learned that even the **Airport Commission had actually already done some studying regarding the potential of solar panels**. This is really good to hear.

Chairman Hentschel, please encourage the Airport Commission to actively & seriously consider installing solar panels in that pillaged acreage.

>>>>>>>>>>>>>>>>

2) In reference to the **Harm Reduction Program**, from 30 yrs of experience in human services I've learned and lived the value of interagency collaboration. In the world of human services, working together to share intellectual and actual resources is one of the best ways to strengthen such a worthy mission as **saving lives** through the Harm Reduction Program.

>>>>>>>>>>>>>>>>

3) Surely the BOC wants to be inclusive. But the 8:00 morning Bd of Commissioners meeting time **excludes too many people**. As we look around, we pretty much resemble an AARP meeting. Most people who are not yet retired are **daytime employed workers** ... and also, **many are parents getting kids off to school**. This 8:00 morning meeting time is a deterrent to people who are in the world of work and those who have young children.

Thank you.

Carol Shuckra
