PHONE: (231) 995-6039 *Fax: (231) 929-7226*

AS OF MARCH 1, 2025

The 2025 minimum water billing for East Bay Township is \$24.18 per month and the Sewer billing is \$27.34 per month/per benefit (single-family home is 1 benefit).

<i>Increases for East Bay Township (scheduled at this time)</i>				
<i>Date of Change</i>	<i>Water for 600 Cu. Ft. Per Month</i>	<i>Per 100 Cu. Ft. Over Minimum</i>	<i>Date of Change</i>	<i>Sewer Per Benefit Per Month</i>
<i>Minimum</i>			<i>Minimum</i>	
03-01-2025	\$24.18	\$2.74	03-01-2025	\$27.34

The charges are calculated by cubic feet per month. One cubic foot is approximately 7.48 gallons.

Included in the monthly billing is the first 600 cubic feet of water. (600×7.48 to get 4,488 gallons).

To calculate: \$24.18 divided by 600 cubic feet = \$.0403 per cubic foot OR
\$24.18 divided by 4,488 gallons = \$.005 per gallon.

If you use more than 600 cubic feet (4,488 gallons) of water per month the cost is an additional \$2.74 per 100 cubic feet (or \$2.74 for every 748 gallons.)

To calculate the amount over the minimum: \$2.74 divided by 100 = \$.0274 per cubic foot OR \$2.74 divided by 748 = \$.003663 per gallon.

If you look at your water bill you will see the Current Reading and Previous Reading in the middle of the bill with the total consumption directly below (Units Used).

Example #1: Current Reading 1,458
 Previous Reading-subtract from Current Reading 1,000
 Water use was 458 cubic feet
 (Or $458 \times 7.48 = 3,426$ gallons)

Since the Water use is 458 cubic feet and this is less than 600 the bill is the minimum amount of \$24.18.

Example #2: Current Reading	13,500
Previous Reading-subtract from Current Reading	<u>5,500</u>
Water use was	8,000 cubic feet
(Or 8,000 x 7.48 = 59,840 gallons)	

Since this is over the 600 minimum, the bill would be calculated like this:

8,000	
- 600	\$ 24.18 (\$24.18 for the first 600 cu. ft.)
7,400 divided by 100 x \$2.74	<u>\$202.76</u> (\$2.74 for each 100 cu. ft. over 600)
	\$226.94
